PMN Material:

Overall wastewater treatment removal is 90%

via sorption.

Sorption to sludge is strong based on data for high

molecular weight polymers.

Air Stripping (Volatilization to air) is

negligible based on data for high molecular weight polymers.

Removal

by biodegradation in wastewater treatment is negligible based on data for high molecular weight polymers.

The aerobic aquatic biodegradation

half-life is greater than six months based on data for high molecular weight polymers.

The anaerobic aquatic biodegradation half-life is

greater than six months based on the aerobic biodegradation half-life.

The anaerobic biodegradation half-life is projected to be greater than or equal to the aerobic biodegradation half-life.

Sorption to

soil and sediment is very strong based on data for high molecular weight polymers.

Migration to groundwater is negligible based on data for

high molecular weight polymers.

PMN Material:

Very Persistent (P3)

based on the estimated aerobic and anaerobic biodegradation half-lives.

Low Bioaccumulation (B1) based on data for high molecular weight polymers.

Bioconcentration/Bioaccumulation factor to be put into
